- 2008 [22] Portmore, Douglas W. (2008): Dual-ranking Act-consequentialism, *Philosophical Studies* 138, S. 409–27.¹

¹ “Dual-ranking act-consequentialism (DRAC) is a rather peculiar version of act-consequentialism. Unlike more traditional forms of act-consequentialism, DRAC doesn’t take the deontic status of an action to be a function of some evaluative ranking of outcomes. Rather, it takes the deontic status of an action to be a function of some non-evaluative ranking that is in turn a function of two auxiliary rankings that are evaluative. I argue that DRAC is promising in that it can accommodate certain features of commonsense morality that no single-ranking version of act-consequentialism can: supererogation, agent-centered options, and the self-other asymmetry. I also defend DRAC against three objections: (1) that its dual-ranking structure is ad hoc, (2) that it denies (putatively implausibly) that it is always permissible to make self-sacrifices that

don’t make things worse for others, and (3) that it violates certain axioms of expected utility theory, viz., transitivity and independence.”

² “To consequentialize a non-consequentialist theory, take whatever considerations that the non-consequentialist theory holds to be relevant to determining the deontic statuses of actions and insist that those considerations are relevant to determining the proper ranking of outcomes. In this way, the consequentialist can produce an ordering of outcomes that when combined with her criterion of rightness yields the same set of deontic verdicts that the non-consequentialist theory yields. In this paper, I argue that any plausible non-consequentialist theory can be consequentialized. I explain the motivation for the consequentializing project and defend it against recent criticisms by Mark Schroeder and others.”

³ “Consequentialism is an agent-neutral teleological theory, and deontology is an agent-relative non-teleological theory. I argue that a certain hybrid of the two namely, non-egoistic agent-relative teleological ethics (NATE) is quite promising. This hybrid takes what is best from both consequentialism and deontology while leaving behind the problems associated with each. Like consequentialism and unlike deontology, NATE can accommodate the compelling idea that it is always permissible to bring about the best available state of affairs. Yet unlike consequentialism and like deontology, NATE accords well with our commonsense moral intuitions.”
